

The background features two large, overlapping circular shapes. The left shape is a solid blue color, and the right shape is a light gray color. They overlap in the center, creating a darker blue shadow effect.

High Level and Low Level Design

AN OVERVIEW

SOLUTIONS FOR YOUR NETWORK
FROM AXIANS UK

As you evolve your ICT services to enhance productivity and meet business goals, you'll need expertise and experience to help design, build, maintain and enhance your Network.

Services Overview

HIGH LEVEL AND LOW LEVEL DESIGN

SERVICES OVERVIEW

Axians can eliminate the anxiety of missing important details when re-designing your network. Our team will ensure that the new design is aligned with your business and technical goals, eradicating costly redesigns and lost time.

We'll produce high quality design documentation that will serve as a guide for the service transition and operation activities that follow. This includes detailed workshops to help your team understand the new architecture and plan for the next steps.

Axians will assign an experienced Project Manager who will serve as a single point of contact to assist with the administration and management of all service deliverables

Making changes to your Network requires a sound understanding of technologies and products. Axians High Level and Low Level Design Service brings you the expertise and experience of our consultancy teams to help you evaluate your current ICT infrastructure, provide architectural guidance and make changes to meet your needs.

Establishing a strong foundation

Alongside our other lifecycle services we can accelerate deployment, helping you realise value faster and maximise your ROI.

REDUCE RISK

Receive consultancy assistance with focused expertise and training; ensuring support and superior execution of your installation.

ACCELERATE

Eliminating costly and time-consuming activities in your deployment.

OPTIMISE

Allowing your staff to focus on service design and operation instead of research on technology and products, reducing operational expenses.

EXPAND

Our experts will train your staff to help deploy, operate and scale the infrastructure on the future.

Axians delivers services using a systematic approach

Axians Lifecycle methodology combines the planning, building, maintaining of your network and brings together the people and the processes. Engaging with our High Level or Low Level Design Service at the start of your service planning cycle will help bring strategic insight from our experts, trusted advisors and consultants.

High Level and Low Level Design The Process

Having completed a full assessment of your technical requirements, Axians Consultants will create a high quality design document based on your specifications

Our consultants will start with a workshop style format to interactively understand your network solution. This includes a review of your business and design requirements and goals. Depending on product and solutions offering this can include:

- Description of services
- Resiliency and availability requirements
- Requirements related to business priorities
- Accessing policies
- Scaling requirement and constraints
- Performance requirements
- Virtualisation and multi-tenancy considerations
- Security policies
- Current limitations and solutions
- Migrations activities

HLD and LLD document

After the detail is collected from our teams, Axians will produce and provide you with either your High Level Design or Low Level Design Document. Depending on your specific solution the documents may contain the following:

- Business goals and technical requirements
- Detailed layouts
- Configuration services and features
- Recommendation for prioritisation
- High availability and security configuration
- Performance and scalability direction

Our teams will conduct meetings with your key stakeholders to review the proposal for final agreement and work on the next steps in the Network Lifecycle process.

Project Management

Axians will manage service deliverables with your dedicated Project Manager, assigning you an Axians Consultant who will service as a single point of contact for the administration and management of your network design.

Axians will provide your designated project management team with input to execute the various deliverables as defined in your service offering. This input will allow for the creation or modification of your project plan. This will typically include deliverables, responsibilities, timelines and milestones.

Availability

Our services are delivered during normal business hours (9am-5pm local) excluding weekends and locally observed holidays. With the exception of pre-defined onsite activities such as workshops or project meetings, this service will be delivered remotely from an authorised Axians Location.
